DigiHealth

DigiHealth helps healthcare institutions broadcast strategic information to heighten the importance of hand hygiene, healthcare-associated infections (HAIs) awareness, patient safety, patient/visitor empowerment, culture of safety, and health and safety literacy in their healthcare settings

What is DigiHealth?

DigiHealth are digital displays dedicated to broadcasting multimedia contents that are specifically developed to engage audiences in order to heighten the importance of health and safety in healthcare settings

DigiHealth contents incorporate evidence-based information, key elements of guidelines and best practices for infection prevention and control, and health and safety promotion from authoritative organizations

Using a cloud-based content management platform, contents are remotely published to DigiHealth displays, allowing them to be readily refreshed anywhere at any time

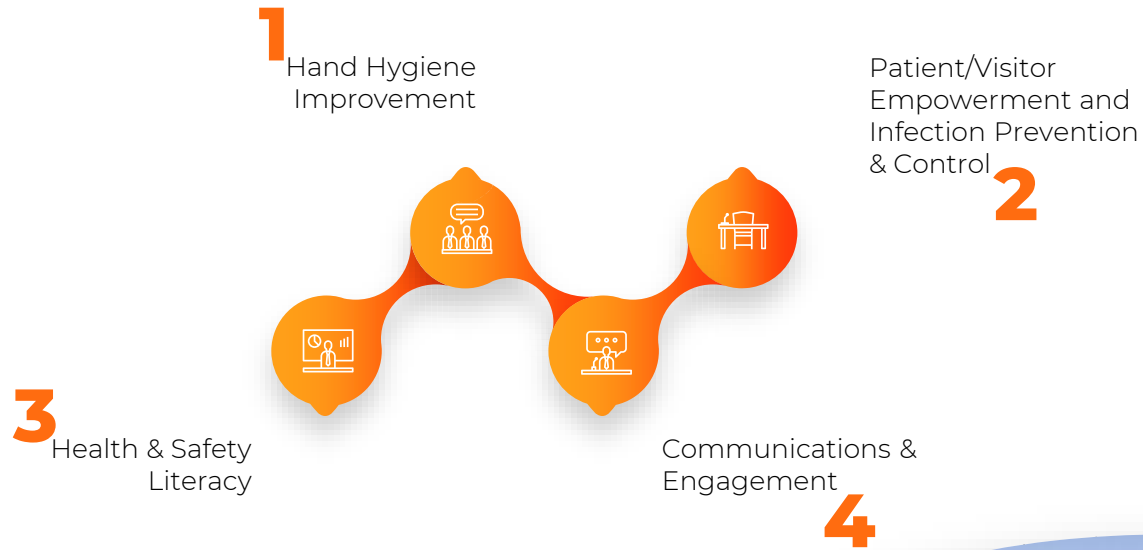

Once installed across a healthcare facility, DigiHealth delivers strategic information to the right places at the right time according to the user-specific requirements

DigiHealth platform supports various types of digital displays, allowing its contents to be delivered not only to DigiHealth displays but also to others with similar capability. This flexibility affords healthcare institutions the benefits of repurposing their existing network of digital displays to take advantage of DigiHealth contents for cost-benefit considerations.

DigiHealth applications

the beginning of
making a difference

Hand Hygiene Improvement

DigiHealth is an ideal tool for healthcare institutions to implement hand hygiene improvement strategy. It incorporates various key elements of WHO Multimodal Hand Hygiene Improvement Strategy to achieve successful and sustained hand hygiene improvement. These include Reminders in The Workplace, Training/Education, and Institutional Safety Climate, as described in WHO Guide to Implementation.

When placed nearby a hand sanitizer dispenser, the display with its visual cues helps improve the rate of connecting reminders with the act of hand hygiene

Adapted with the permission of Public Health Ontario

1

Hand hygiene

is key to protecting the patients, the visitors, the healthcare providers, and the healthcare environment against the spread of germs and thus **reduces HAIs**

Patient/Visitor Empowerment and Infection Prevention & Control

DigiHealth provides healthcare institutions an effective platform to encourage and promote patient/visitor empowerment in infection prevention and control.

DigiHealth presents educational information in an ease to understand format on topics such as healthcare-associated infections (HAIs) and their serious burden on patients and healthcare systems, the means of transmission of pathogens, the When's and Why's of '4 Moments for Hand Hygiene', how to handrub, and the importance of hand hygiene in healthcare settings to prevent HAIs.

DigiHealth promotes hand hygiene and HAI literacy so that patients and visitors are more prepared to engage in taking on hand hygiene responsibility for infection prevention and control

2

Health & Safety Literacy

DigiHealth provides healthcare institutions a platform to create awareness and promote health and safety literacy to various audiences, enabling them to increase control over their own health and safety.

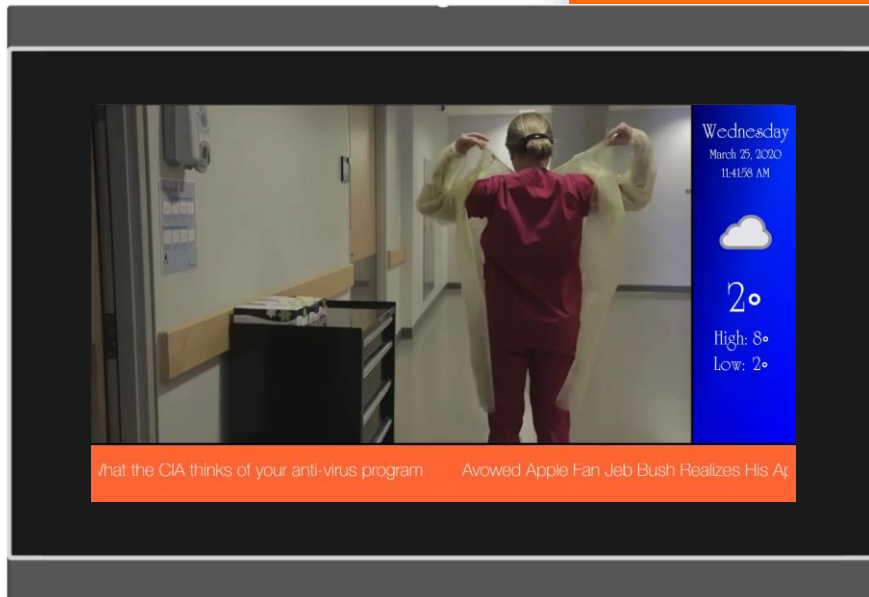

DigiHealth incorporates various informative contents that cover health and safety topics relevant to WHO Promoting Health guide. These topics include healthcare-associated infections (HAIs), the importance of hand hygiene, alcohol consumption and health risks, obesity and chronic diseases, healthy eating and food guide, adolescent mental health and mental illnesses, and more.

3

DigiHealth lets healthcare institutions implement various health literacy campaigns. They are used to educate and empower audiences to take action to improve their health by changing their personal lifestyles, and thus improving community health as a result.

4 Communications & Engagement

Adapted with the permission of Public Health Ontario

DigiHealth can serve as a platform for healthcare institutions to augment their communications and engagement with their staff, patients, and visitors.

DigiHealth provides a strong communication network that can be used to underline the institution's philosophy and position statement, and to reinforce the institution's commitment to quality patient care and a "culture of safety"

How we help

DEVISE

Collaborating with customers, we devise strategies based on our DigiHealth to deliver the right information to the right places according to their individual needs

DESIGN

We customize our DigiHealth, create new contents, and design campaigns according to the customer-specific requirements to meet the devised strategies

DELIVER

Our cloud-based content management platform delivers, maintains, and monitors contents published to networked displays, anywhere and at anytime

Exploring the possibilities

At HyFives, our goal is to contribute to making a positive and transformative impact on health and safety for everyone by encouraging, empowering, and nurturing literacy in health and safety topics.

We believe HyFives is perfectly suited with your commitment to improvement, excellence, leadership, and exemplary health and safety. We invite you to explore the possibilities with us.

Contact us at info@hyfives.com to arrange for a demo for your review and considerations.
